

## 1. INSTALLATION OF "CHEESE PROCESSING UNIT"

In the year 2022, the Department of Food Science and Technology has established another Laboratory capacity at the campus, which is intended to offer advance training to our students as well offer community level services. The department has installed "Cheese processing Unit" at the campus under a project funded by Higher Education Commission (HEC) of Pakistan's "National Research Program for Universities" (NRPU). This Laboratory is equipped with different processing and analytical equipment to conduct research and diagnosis for milk and milk products especially cheeses. Main equipments includes; Cream Separator, Chillers, Milk adulteration Kits, Lactoscan, cheese vat, flam photometer, gel electrophoresis, vacuum packing machine, Stretcher machine, Cheese molds/presser, for product development. The addition of another laboratory has proved to be a great resource for the practical learning and research capability of under and post graduate students. Additionally, "Milk Processing and Analysis Unit" and Labs of Soil Science department has been a great support for the local community to test milk adulteration, learning processing techniques and soil fertility testing facility.
