

Inform and Support the Government

Informing government decision-making on climate change issues with scientific and technical expertise is a major responsibility of the University of Poonch Rawalakot (UPR). This may entail gathering data on possible adaptation and mitigation techniques as well as performing research on the effects of climate change in the local or regional community. Universities may contribute to the formulation of public policy and the advancement of successful climate change action by disseminating this information to local or regional government representatives.

Additionally, by offering their expertise in early warning and response systems, universities can assist government efforts to monitor and respond to climate change risks and disasters. This could entail creating assessments of the risks associated with climate change, creating and implementing early warning systems, and assisting with emergency response activities. Universities can also instruct and train nearby communities on how to anticipate and react to hazards and disasters related to climate change.

Furthermore, by forming alliances and working together with governmental bodies and neighborhood associations, universities can actively assist local or regional government initiatives to address climate change-related issues. Collaboration between academic institutions and governmental organizations can optimize their assets and proficiencies to create and execute community-wide climate change policies that are beneficial to all.
